

## AI and data for lunch: April 2024

---

A 45 minute webinar for everyone interested in AI, technology, privacy and information rights.

### Here's what we discussed

This month, we looked at why TikTok was fined £12.7m, how it argued the case and what the outcome means for us all. We also ran our own experiment to see how difficult it is to create a TikTok account if you are under 13. The result? If you're honest, computer says no!

We were joined by two guests from Domino's, Alex Press (senior legal counsel and DPO) and Lauren Turner (legal counsel) for a virtual fireside chat about the ICO's consultation into GenAI. In case you missed it, here is our first [response to the ICO consultation series on GenAI](#). The second will follow later this month.

And finally, our three AI musketeers talked to us about EVI, the world's first emotion-sensitive AI, [humanoid robots](#) and how farmers are using AI to improve agriculture.
